1. Maximum EPA (Effective Projected Area) and weight values are based on side mounted fixtures only. Consult factory on loading criteria for pole top mounted luminaires and/or brackets. Variations from sizes above are available upon inquiry at the factory. Satisfactory performance of poles is dependent upon the pole being properly attached to a supporting foundation of adequate design.

2. Structure weight is a nominal value which includes the pole shaft and base plate only.

3. Bellied-bottom will have reduced thickness due to the cold-working process. However, the bellied-bottom meets or exceeds the structural capacity of the original square section. In addition, the rounded section provides better fatigue resistance.
